PDP

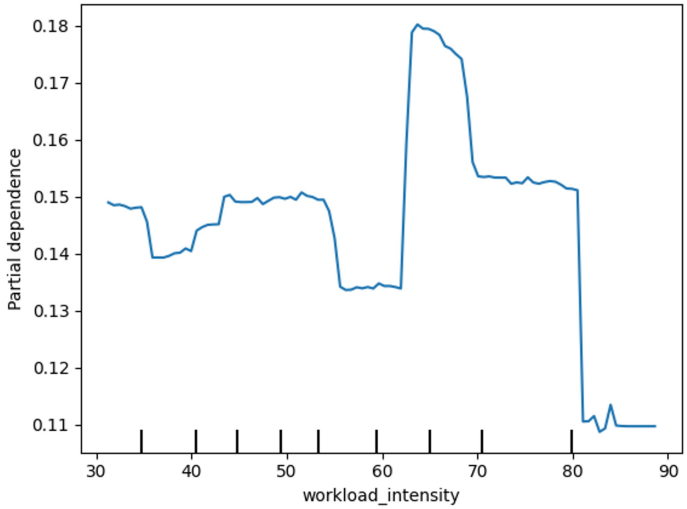

PDP for number of Project:

- **Project allocation for right amout of project per person**
  - Project less than 2 -> Underuntilization problem
  - Project 3 to 5 -> Stable status
  - Project over 6 -> Attrition risk increase likelihood of attrtion increase 80+%

PDP for workload intensity(average working hour per project)

- **Monitor and manage the 65–70 band aggressively & Prevent employees from entering 80+ per project**
  - 80+hrs: extreme overload - employees are too busy burned out to pursue job changes
  - 65 - 70hrs: sharp spike in attrition risk - high performers under rising stress + strong market visibility
  - Below 60: stable workload

PDP for average monthly hours

- Try to inform people managers to not to work each employees to work more than 220hrs per month
  - Below - 160hrs: underuntilization / low engagement zone -> employees may be under-assigned or not fully utilized -> performance concerns may exist
  - 160 to 220hrs: stable -> recommended monthly workload range.
  - 220 to 250hrs: mid attrition risk - workload begins to exceed sustainable levels.
  - 250hrs+: sharp atrition increase likelihood

PDP for tenure & tenure bracket

- 0–2 years → High attrition risk
  - Early-stage employees are still exploring role fit and are more likely to leave.
- 3–5 years → Peak attrition risk. This is the most critical period. Employees want growth, visibility, and career movement.
  → HR should provide performance-based promotions or role rotations to maintain motivation.
- 6+ years → Stabilized. Attrition risk decreases. Employees become more settled and less likely to leave.
